SECTION 8: EXPOSURE CONTROL / PERSONAL PROTECTION

Exposure Guidelines

| Hazardous Component | OSHA PEL | ACGIH TLV |
|-----------------------------|-----------------------------------|--|
| Magnesium Aluminum Silicate | N/A | N/A |
| Aluminum Oxide | 15 mg/m ³ (total dust) | 1 mg/m ³ (respirable) (as Al metal) |

Engineering Controls: Process enclosures, local exhaust or other engineering process controls may be necessary to keep any air contaminants associated with this product within their TLV'S. This is particularly true if user operation generates dust.

Respiratory Protection: As this product is a proprietary mixture of unique ingredients, it does not have an established limit for airborne concentration (PEL or TLV). Furthermore, if this material is used as recommended with solution, it should have limited potential to expose personnel with dusts that would require respiratory protection. The user must review their own circumstances and then determine what is required to establish a respiratory protection program that meets their requirements, within OSHA 1910.134. If workplace conditions warrant respiratory protection, use MSHA/ NIOSH approved units as listed in the current 29 CFR 1910.134 for the existing conditions. Actual respirator selection should be made after consultation with a competent health and safety professional.

Protective Gloves:

Optional as needed to prevent skin contact.
